

LimelightSITE

Accelerate your entire website while lowering your overall IT infrastructure costs.

Engage every customer. Fulfill every request. Keep every visitor on your site and keep them coming back for more. With LimelightSITE™ services running behind the scenes, your web pages will load in a flash—even with huge media files, globally distributed audiences, and unexpected traffic spikes.

LimelightSITE is a new content delivery platform that accelerates entire websites and everything associated with them—HTML and JavaScript objects, style sheets, and rich media elements. Specifically designed for enterprises, LimelightSITE improves site performance, protects user interactions, and enhances content control and reporting.

“One second delay in response times of web applications can impact customer satisfaction by up to 16 percent.”

Aberdeen Group
November 2008

Benefits

- Accelerate your visitors' online experience, increasing engagement and loyalty
- Add rich media content and other large files—and deliver them fast.
- Lower the cost of delivering static, dynamic, and rich-media content
- Accommodate peak loads and flash crowds
- Provide a consistent user experience from any geography

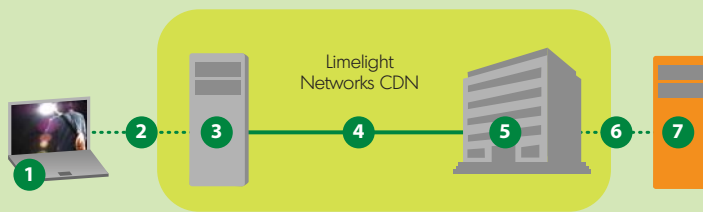

On-Demand CDN Infrastructure

LimelightSITE takes full advantage of the Limelight Networks® CDN infrastructure. Our dedicated fiber-optic backbone interconnects Delivery Centers around the globe, delivering your website directly into more than 900 access networks—the ones your customers use every day. And for the fastest possible content refreshes, OriginDirect™ routing technology takes a direct path to origin to retrieve your web content.

Not only can LimelightSITE fulfill visitor demands with outstanding responsiveness, but it saves you the cost of building out and maintaining your internal infrastructure. When you partner with Limelight Networks, you're tapping into years of CDN expertise. Plus our network is already equipped to store all your content and to handle peak loads generated by new product announcements, special events, or marketing campaigns.

Without a network-based CDN, your site delivery is at the mercy of the busy public Internet. Rather than maneuvering around the bottlenecks, why not bypass them altogether? LimelightSITE gives your web content a private express lane to your users' networks.

LimelightSITE Delivery at CDN Speeds

- 1 Customers engage with your website.
- 2 Since our backbone connects into 900+ access networks, customers are most likely connected directly to our CDN.
- 3 Your content is cached at Delivery Centers on the edge, for immediate delivery to customers.
- 4 Our OriginDirect technology refreshes your content at the speed of light—without ever touching the congested public Internet.
- 5 Our data centers are massively equipped to host—and even back up—all of your web content.
- 6 Content is refreshed from your servers as necessary. If your servers are co-located with one of our data centers, we can use IP Connect to create a private connection.
- 7 Your web servers are freed up to handle dynamic content and transactions more efficiently.

Comprehensive Solution for Enterprise

Whatever your Internet strategy, LimelightSITE allows you to stay focused on what you do best—with confidence that that your online operations will meet seasonal and promotional demands, attract and retain valued customers, and scale to match your vision.

The LimelightSITE web acceleration platform includes a suite of integrated services:

Content delivery. Deliver web content directly to more than 900 access providers over our dedicated optical network. OriginDirect routing technology ensures a high-performance and reliable path back to the data center to retrieve static, dynamic, cacheable, or un-cacheable content—bypassing the congested public Internet. Choose from 5TB of transfer per month or 150Mbps of throughput per month.

Optimization and site protection. Enhance the user experience with persistent connections, object compression, cache control headers, and TTL overrides. Protection features include on-the-fly failover and load balancing to shield your site from high traffic loads.

CDN Storage. Up to 250GB of next-generation storage, for tremendous scalability, redundancy, and reliability—so you can offload the burden of handling huge volumes and ensuring data safety and availability.

Reporting and analytics. The LimelightEXCHANGE™ portal provides detailed reports on storage and bandwidth utilization, historical data, most requested content, geographic traffic, and more—giving you full visibility into site activity and non-stop control over your content.

The Limelight Networks CDN

- Strategically located Delivery Centers
- Nearly 11,000 servers worldwide
- More than 9PB of customer storage
- Global network capacity in excess of 2.5Tbps
- Direct connection to more than 900 access networks
- Over 85% of all objects delivered via our private fiber-optic network
- 24/7 call center availability

Optional Services

When you partner with Limelight Networks, you can tailor your LimelightSITE deployment by adding any or all of these complementary services:

Progressive download. Allow users to view your media or other objects immediately. Progressive download is the perfect delivery choice for objects such as demonstration videos, marketing PDFs, and software demos.

Streaming media. Capture the attention of customers, resellers, analysts, and employees with streaming video for live or on-demand consumption. Whatever your experience level, our industry-leading services will help you ensure a flawless broadcast.

Security and compliance. Choose from a host of options: SSL encryption to secure connections to your cached content; geo-compliant content delivery based on the global locations of your users; and low-latency security techniques that protect against deep linking and unauthorized access.

Integration services. Let experts from our LimelightPS™ professional services team help you jumpstart your deployment, organize your content, or support you in building and managing a best-in-class web infrastructure.

Premium support. Choose from three support tiers, including LimelightSUPPORT™ Premium+ for the dedicated services of tier-two engineers who know your business inside and out.

Transit. Connect your application infrastructure directly to the private Limelight Networks backbone to give your users lightning-fast access, regardless of the content source.
